

Element and Tag in HTML

What is a tag?

Tags are the building blocks of HTML documents and consist of angle brackets enclosing specific keywords. These tags provide instructions to web browsers on how to display the content.

opening HTML tag

closing HTML tag

<tag>content that is affected by this tag**</tag>**

content that is being marked up

Types of Tags

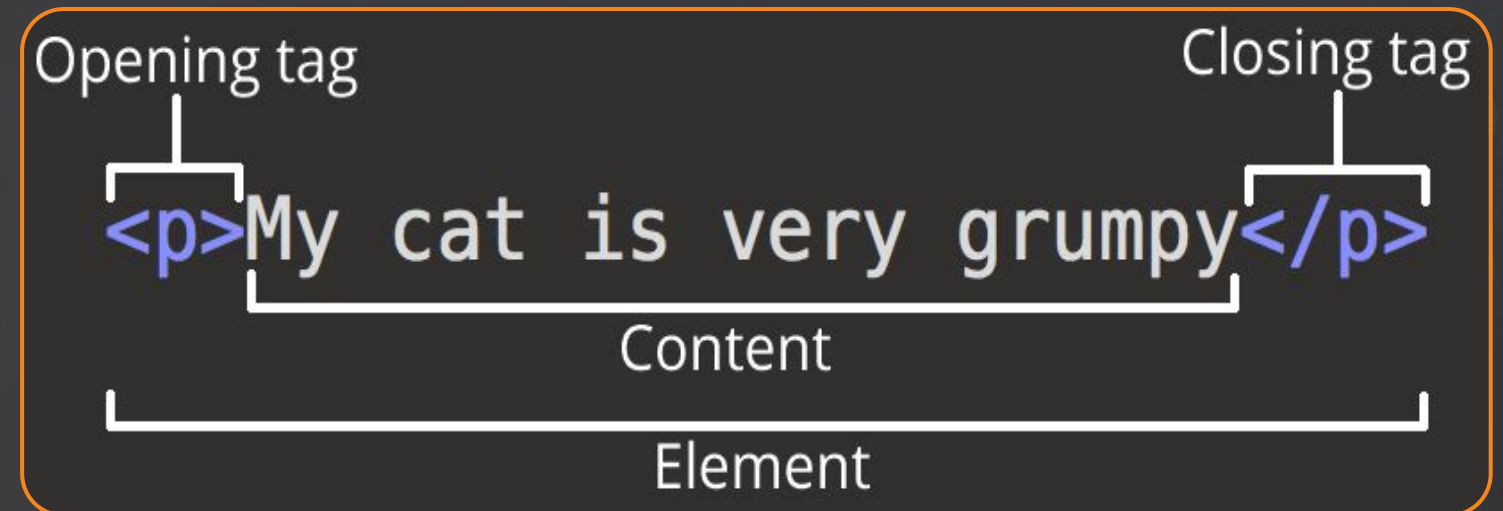

HTML tags can be broadly categorized into two types:

1. Paired Tags (or Container Tags)
2. Singular Tags (or Void Tags)

What is an element ?

HTML elements consist of a start tag, an end tag (if applicable), and content in between the tags.

Some Common Tags

1. Heading(h1, h2,h3,h4,h5,h6)
2. Paragraph(<p>)
3. <hr> tag
4.
 tag
5.
